

McKee Risk Management's Construction Practice focuses on defined segments of this industry. We capitalize on our underwriters' technical expertise and provide creative, comprehensive solutions to middle market contractors. Our commitment is to provide world class Underwriting, Claims Handling and Risk Engineering to our customers. In the past this type of attention has been reserved for only the largest construction accounts.

Target classes encompass a broad range of infrastructure contractors such as Street and Road, Excavation and Land Clearing, Water and Sewer Construction and others. Most of our clients have a proven track record of profitability and have earned the right to be recognized and rewarded for their performance.

McKee has earned broad risk selection and pricing authority with our partner carriers. As the decision makers, we can respond quickly to your clients' needs and offer multiple insurance solutions.

As of 2013, The American Road and Transportation Builders Association (ARTBA), one of the oldest contractors associations in the US, entered into an exclusive, long term agreement naming McKee Risk Management as their Insurance Program Manager. McKee brings a proven underwriting expertise in understanding the complex exposures unique to this demanding contractor class.
